DETAILED ACTION

Specification

The abstract of the disclosure does not commence on a separate sheet in accordance with 37 CFR 1.52(b)(4). A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

The disclosure is objected to because of the following informalities:

The specification does not contain any section headings.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 6, 8, and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Moody et al. (4,671,068).

In figure 1, Moody et al. teach a pneumatic high speed motor, comprising a stator housing (not numbered), a rotor 22 journaled in said stator housing, a pressure air inlet passage 18, a speed governor valve 26,28,50 shiftable between an open position and a closed position for controlling the pressure air flow through said inlet passage 18, and a spring 60 arranged to continuously bias said speed governor valve 26,28,50 in the direction of said open position, wherein an air compressor 14,30 is driven by said rotor 22 and arranged to deliver a rotor speed responsive output pressure, said speed governor valve includes a valve element 56 having an activating surface exposed to the output pressure of said air compressor 14,30 for generating a pressure responsive activating force on said valve element 56 and accomplishing shifting of said speed governor valve 26,28,50 in the direction of said closed position against the bias force of said spring 60 at rotor speed levels exceeding a desired operating speed level. It is

Art Unit: 3745

noted that the terms "open position" and "closed position" are given the broadest reasonable interpretation corresponding to "a rotor speed responsive output pressure". And further, the preamble in claim 1 reciting "a pneumatic high speed motor" are not considered as limitations of the respective claims, and the claims that are dependent on the above claims, because body of the claim 1 does not directly include the structure of the "pneumatic high speed motor". See MPEP 2111.02 [R-2] PREAMBLE STATEMENTS RECITING PUR-POSE OR INTENDED USE.

Allowable Subject Matter

Claims 3, 5, 7, 9-13, and 15-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior Art

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of one patent.

Allingham (3,128,989) is cited to show a high speed rotor having a speed governor valve but fails to teach a compressor acting on the governor valve.
